TECHNICAL SKILLS: React, Redux, JavaScript, Ruby on Rails, PostgreSQL, Node.js, Express.js, HTML5, CSS3, AWS

PROJECTS:

Fullstack Engineer

Nov 2019

ViewTube (React, Redux, Ruby on Rails, JavaScript, PostgreSQL, CSS3, AWS S3, HTML) [Live Site](#) | [Github](#)

A full-stack web application that mirrors the functionality of YouTube and utilizes CRUD features for video sharing.

- Implemented seamless UI/UX design using React library to make navigating the functionality of each feature easy and reusing React components simple.
- Utilized React component lifecycle methods to control local state and render HTML to provide responsive frontend.
- Integrated backend Rails Active Storage with market-leading AWS S3 to ensure reliable service for fetching, storing, and uploading videos.
- Constructed streamlined Redux state utilizing custom JSON responses built with Jbuilder allowing the easy addition of new features such as comments and likes on videos.
- Managed user and video information with a relational database built with PostgreSQL and using Rails Active Record associations.

Junior Frontend Engineer

Nov 2019

Danceability Data Visualization (Spotify API, d3.js, Express.js, JavaScript, HTML)

[Live Site](#) | [Github](#)

A single-page app that makes secure HTTP requests to Spotify's API and displays user's Spotify track data using d3.js.

- Implemented the RESTful route conventions to create routing in Express.js that allows a user to login to their Spotify account and see their data with a click of a button.
- Engineered HTML canvas, graph, plot points, and tooltips using the d3.js library.
- Utilized Spotify's OAuth process to log in a user securely to their account and retrieve their recent listening history.
